✓ Pool cover is hidden behind the pool wall

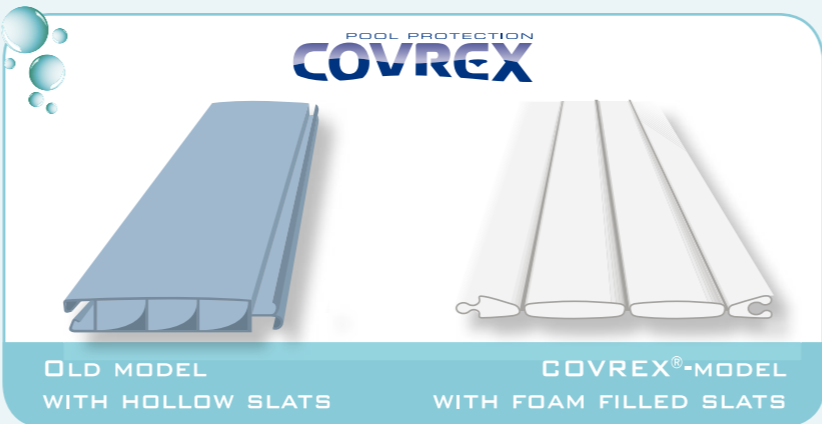

STATE-OF-THE-ART TECHNOLOGY

- ◆ The swimming pool covers from COVREX® consist of several layers of PVC foam that meets ISO standard I 183 and severe French NF P 90308 security standards.
- ◆ The sections are co-extruded and joined together with a pliable polyurethane seam that has a tear strength in accordance with DIN standard 53504.
- ◆ The co-extrusion technology and the quality of the raw materials make COVREX® the world's **most resistant** pool covering, providing resistance against : hail, frost, extreme temperatures (from -40 °C to +100 °C), and pressure of 250 kg per m² !
- ◆ **Isolation:** Moreover, the weight of the cover (5.5 kg per m²) provides an excellent thermal insulation coefficient : $\lambda = 0,12W(m^{\circ}K)$.
- ◆ Because of their specific design, COVREX® slats have a life expectancy twice as long as traditional pool cover slats, and don't suffer from water ingress, algae and dirt formation after a few years of use.

AVAILABLE COLOURS: Silex Grey, Creme White, and Light Blue.

WARRANTY: COVREX® slats benefit from a **5 year** warranty, the motor and the drive system benefit from a 3 year warranty. All drive systems are manufactured in stainless steel 316 L.

All product developments have been patented worldwide.
